

Turning the existing little league field as shown opens up some land near Parrott Ave.

Similarly, a copy of the existing softball field (that could double as little league & softball) fits with a very small change to Parrott Ave.

This takes the “boxes” for the components and rearranges them a little- turning the auditorium 90 degrees and placing it on the other side of Rogers- this creates an opportunity for a community/school auditorium building. The Team wing (yellow) can create a courtyard effect in front of the school’s great façade.

Building on the previous, one option is to maintain the large softball field south of Parrott and to create a turnaround in front of the school (large existing trees can be placed inside the loop).

Another option is to maintain a little league-sized field south of Parrott and to create new deflected alignments for Parrott- by the mill pond and behind the buildings.  
The large green space in front of the building needs to be considered- a LOT of space.

This shows one option for a variation of the “left” option- a larger playing field to the south of Parrott and a better, slower, Parrott alignment.
